**OverHead**

**BUSINESS OFFICE GUIDE**

# Bring the daily office into clearer view.

OverHead is a local-first Windows workspace that helps an owner-led business organize customer follow-through, active work, approvals, and support-ready records.

---

See the next action, keep the right context, and retain control of sensitive decisions without taking on an enterprise-sized system.

## WHAT IT HELPS WITH

# One practical workspace for the work that tends to scatter.

### **CUSTOMER FOLLOW-THROUGH**

#### **Keep useful context close.**

Organize customer details, service notes, preferences, and the next step so staff do not have to reconstruct the story.

### **DAILY OPERATIONS**

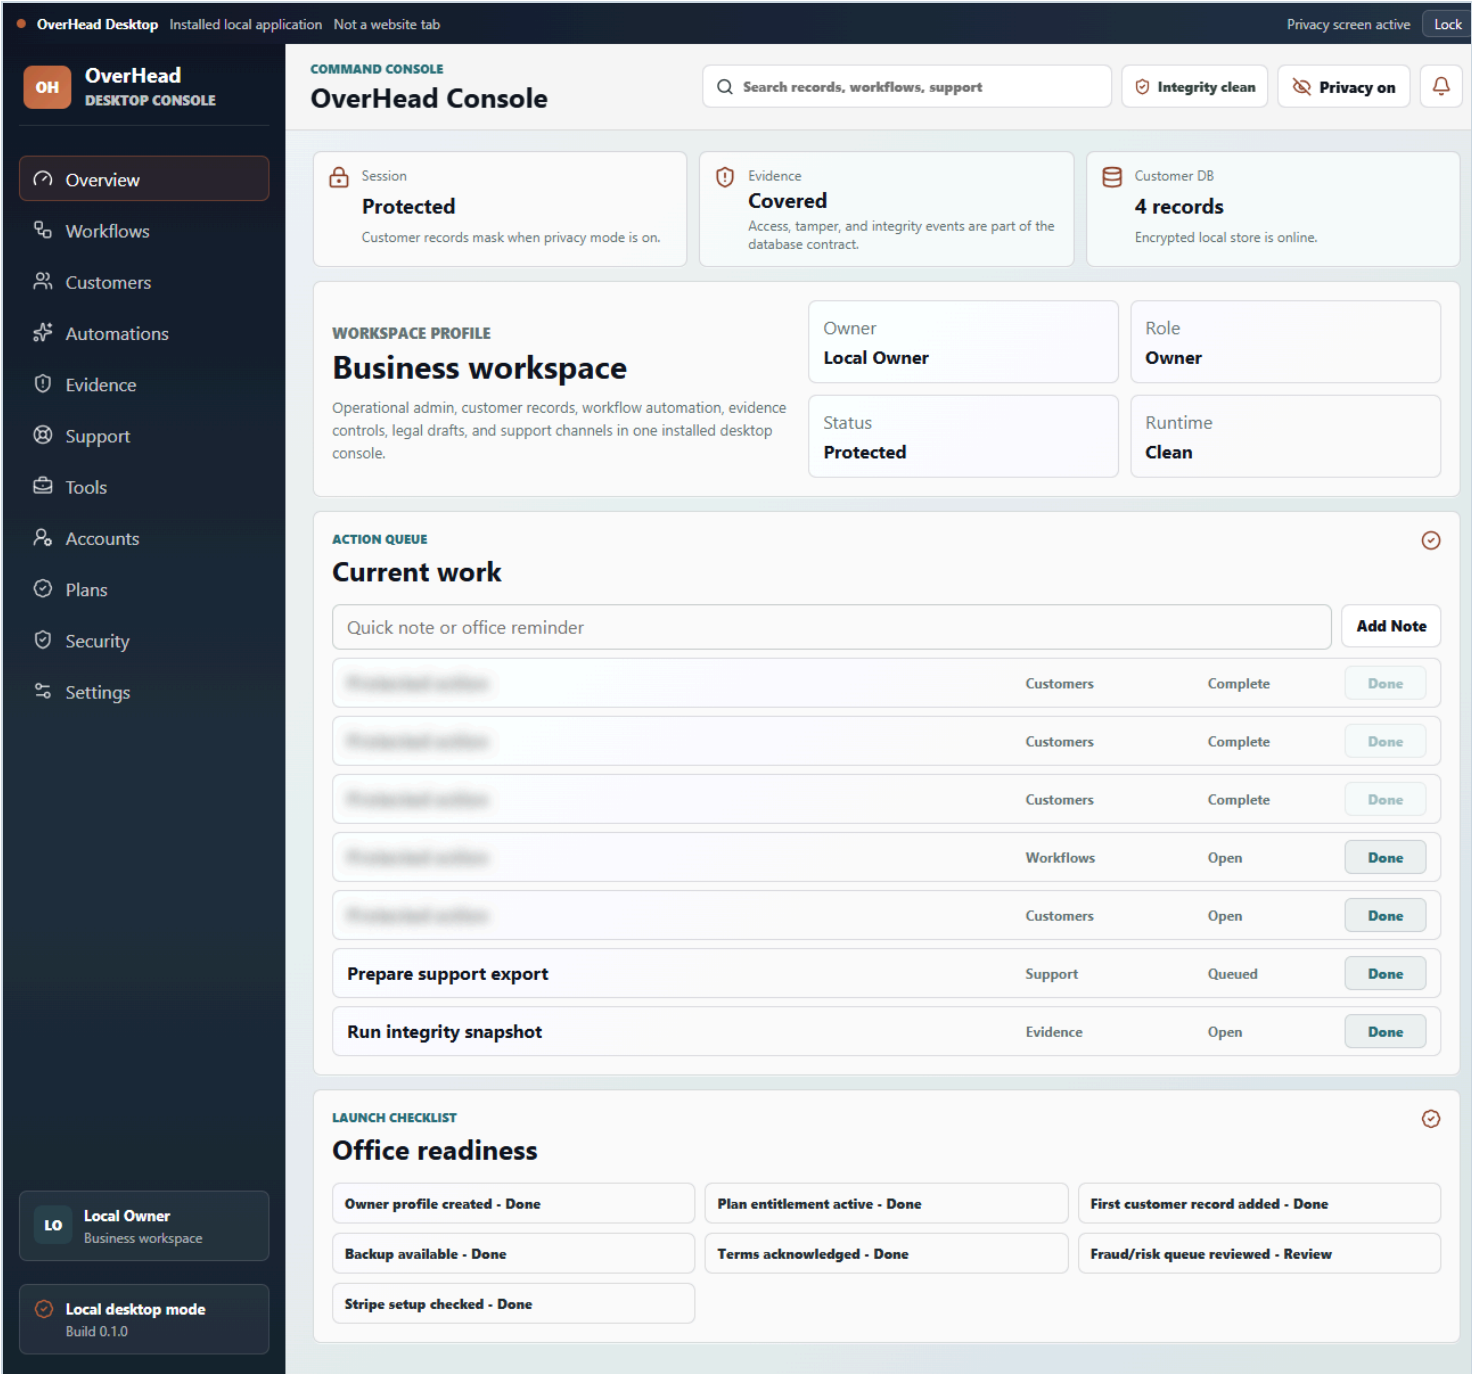

#### **Make the next action visible.**

Use current-work queues, reminders, workflows, quotes, invoices, and follow-ups to keep routine handoffs moving.

### **OWNER CONTROL**

#### **Keep decisions explainable.**

Use roles, approvals, activity records, exports, and recovery tools to keep important changes understandable.

Example desktop workspace. Available functions depend on the installed version and any connected provider configuration.

## HOW TO START

# Start with one workflow that matters.

### 1. SET UP THE OWNER WORKSPACE

#### Give the office a clear home.

Create the owner profile, set the business context, and choose the role each person actually needs.

### 2. CHOOSE A FIRST USE

#### Prove value in daily work.

Begin with customer follow-through, a quote review, a reminder queue, or another workflow that already causes friction.

### 3. REVIEW MATERIAL CHANGE

#### Keep people accountable.

Use management approvals where a change affects a customer, money, access, policy, or recovery state.

### 4. KEEP A RECOVERY PATH

#### Prepare for the unexpected.

Use local backup, export, support-bundle, and restore-validation tools—and protect the files they create.

## 30-day free Gold trial

OverHead is designed to offer one no-card, Gold-equivalent trial per workspace for 30 days. Trial activation becomes available when secure production billing and account services are enabled. No payment is created for the trial.

# Clear boundaries support better decisions.

## OverHead is designed to organize

- Customer context and active work
- Quotes, invoices, approvals, and handoffs
- Role-aware access and support-ready records
- Local backup, export, and recovery guidance

## OverHead does not replace

- Owner judgment or staff supervision
- Professional legal, accounting, or security advice
- A payment provider's processing or dispute process
- Your required compliance, backup, or incident plan

## Privacy and support

Use only the customer information needed for the work. When asking for help, share the app version, what happened, and a sanitized support bundle when useful—never a password, recovery phrase, full card detail, tax identifier, or unredacted customer record.

---

Learn more, download the current Windows release, and review current availability at [overhead-office.web.app](https://overhead-office.web.app). Product, policy, and commercial language should be reviewed against the installed version and live service status.
